Swales, John M. *Genre Analysis: English in Academic and Research Settings*. Cambridge UP, 1990.

Swales introduces the concept of the discourse community and argues that communities are defined by shared goals, specialized language, and recurring genres. He explains how genres function as structured forms of communication that both reflect and reinforce a community's values and expectations. This source is foundational for understanding how writing operates within professional and academic groups. I will use Swales' framework to analyze how ski patrol and ski school function as discourse communities, particularly in relation to accident reports, lesson notes, and radio communication. His theory helps support my claim that communicative competence—not just skiing ability—determines membership and expertise within Killington's mountain operations community.

National Ski Patrol. *Outdoor Emergency Care: A Patroller's Guide to Medical Care on the Slopes*. 6th ed., Jones & Bartlett Learning, 2021.

This manual outlines the medical, procedural, and documentation standards required of ski patrollers. It emphasizes objective reporting, clear communication, and structured response protocols during on-mountain emergencies. The text

demonstrates how accident documentation and radio communication are not informal practices but institutionalized requirements tied to safety and liability. I will use this source to contextualize my interview findings, particularly my father's discussion of factual report writing and radio discipline. By showing that patrol documentation follows nationally recognized standards, this source strengthens my argument that genre conventions in mountain operations are structured, regulated, and central to professional credibility.

Devitt, Amy J. *Writing Genres*. Southern Illinois University Press, 2004.

Devitt explores how genres function within communities and argues that genres are not simply forms of writing but social actions that shape how members communicate and participate in a community. She explains that individuals learn genres through experience and participation rather than formal instruction. This idea is useful for analyzing how ski instructors and ski patrollers learn communication practices such as lesson notes, radio communication, and written documentation. In my research, Devitt's work helps explain why new members of the Killington mountain operations community learn writing practices through mentorship and observation instead of structured classroom training.

Professional Ski Instructors of America–American Association of Snowboard Instructors. *The Professional Snowsports Instructor's Handbook*. PSIA-AASI, 2014.

This handbook outlines the professional expectations and instructional methods used by ski instructors. The text focuses on effective teaching techniques, communication with students, and maintaining professional standards within ski schools. It emphasizes that instructors must clearly explain skiing techniques and

provide structured feedback to students. In my research, this source helps support my analysis of communication within ski instruction. It shows that communication is a core part of teaching, reinforcing my claim that instructors must develop strong communication skills to effectively guide students and coordinate with other staff members on the mountain.

Winsor, Dorothy A. *Writing Like an Engineer: A Rhetorical Education*. Routledge, 1996.

Winsor studies how professionals learn workplace writing and argues that writing competence develops through participation in a professional environment rather than through formal instruction alone. She explains that new members often learn communication practices by observing experienced coworkers and gradually adapting to workplace expectations. This idea connects directly to my primary research interviews, where both ski instructors and ski patrollers described learning writing practices through feedback and observation. Winsor's research helps support my argument that communication skills in mountain operations are developed through mentorship and experience rather than formal training programs.

Russell, David R. "Rethinking Genre in School and Society." *Written Communication*, vol. 14, no. 4, 1997, pp. 504–554.

David R. Russell is a scholar in writing studies whose research focuses on genre theory and professional communication. In this article, Russell examines how genres function across both academic and workplace environments. He argues

that genres help organize activity systems by providing structured forms of communication that allow individuals to collaborate and coordinate work. His research emphasizes that genres are tied to the goals and activities of specific communities.

Russell's work connects with Bazerman's discussion of genres within activity systems. Russell explains that genres help coordinate professional activities, noting that "genres are tools that mediate complex social activities" (Russell 512). Bazerman makes a similar argument when he explains that genres allow participants to coordinate actions within organizations. Together, these sources reinforce the idea that communication practices such as documentation and reports help organize professional communities like mountain operations teams.
